

THE FPS GUIDE

TEAM MEMBERS: Fallon Lewin & TP

THE PURPOSE:

TheFPSGuide, is to provide a structured, comprehensive learning path for competitive players across both PC and console platforms, helping them increase their mechanical consistency.

TARGET ADUINCE:

The FPS guide for individuals between the ages of 15 and 30. This includes high school and college students, as well as young professionals, who are gamers and motivated by competitive gaming.

LIST OF PAGES

- Homepage
- Agent Breakdown
- Map Guides
- Crosshair Guide
- Player Settings
- Aim Routine
- PC Hardware
- Submit Clips
- Feedback Page
- Link Page

LAYOUT:

Header displays the site title “TheFPSGuide” centered at the top.

Navigation- Horizontal menu bar has 10 clickable links. Homepage, Agent Breakdown, Map Guides, Crosshair Guide, Player Settings, Aim Routine, PC Hardware, Submit Clips, Feedback Page, and Link Page.

Main- Shows the homepage introduction, including the “Elevate Your Competitive Play” section and the “Core Training Focus” bullet points.

Design & layout

USE OF COLORS:

We used a consistent color scheme across all pages

The header and navigation bar use a dark background for contrast

Text and links use lighter colors to improve readability

Accent colors highlight important sections like headings and buttons

Elevate Your Competitive Play

Welcome to **TheFPSGuide**. Our mission is to provide a structured learning path that helps competitive players increase their mechanical consistency. We focus on the core mechanisms needed to perform at the highest level in ranked modes across both PC and console platforms.

Core Training Focus

- Mechanical consistency in high stakes ranked modes.
- Advanced agent specific movement and ability timing.
- Optimized hardware and sensitivity configurations.
- Universal fundamentals that apply across all FPS titles.

USE OF LISTS:

Bullet lists are used to organize information clearly

The “Core Training Focus” section uses a list for readability
Lists help break up text and make content easier to scan

USE OF IMAGES:

Images are used on the homepage to add visual interest

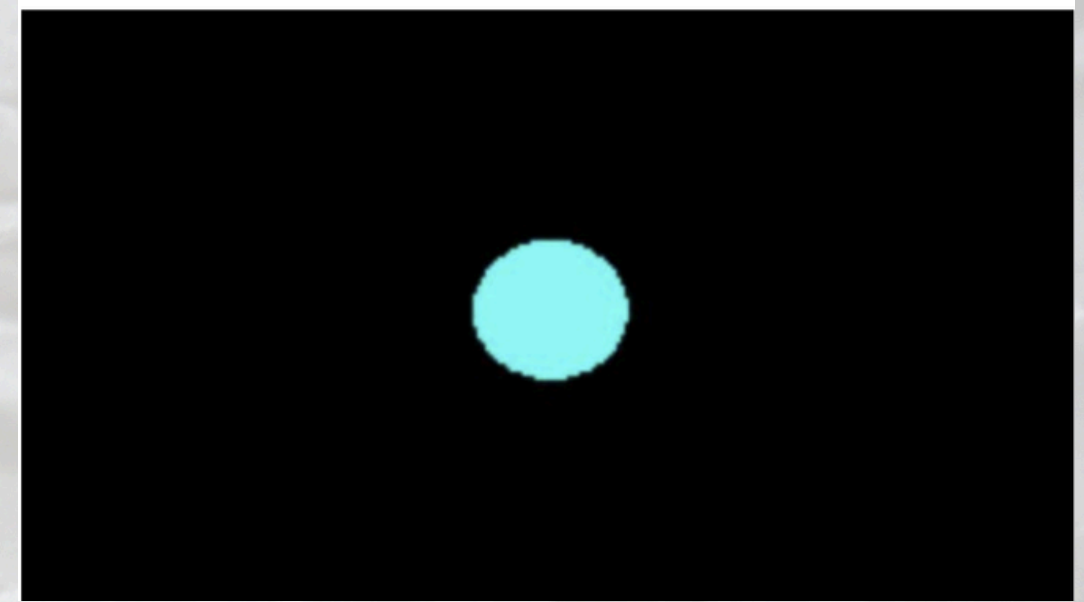

Media files are displayed using the tag

Images help support the theme of the site (FPS gaming)

Examples include the Valorant map and the blue circle graphic

Features Implemented

FORMS:

There are submit clips page. It has labels to tell the user what information to enter. Input where the user types their clip details.

Links\Navigation:

Our website uses a navigation menu with 10 clickable links that let the user move between pages.

MEDIA:

For the media feature, we added an image to our site. we used the tag to display it. This is the picture we included.”

Technical Implementation

HTML structure

The HTML structure of our site is pretty simple. We used a header for the title, a navigation section for all my links, a main section for the page content, and a footer at the bottom. These tags just organize everything so the page has a clear layout.

```
25      <li><a href="feedback.html">Feedback Page</a></li>
26      <li><a href="links.html">Link Page</a></li>
27    </ul>
28  </nav>
29 </header>
```

CSS Structure

For the CSS, We mainly used it to control how the site looks. It handles things like the colors, spacing, fonts, and the layout of the navigation. Basically, the HTML gives the structure, and the CSS makes it look cleaner and easier to read.

Challenges & solutions

Our main goal was to make sure every page looked identical and worked perfect on the computer

To solve this we used a single external CSS file that controlled the look of every page at once

TEAM CONTRIBUTION

FALLON

Built 2 website pages

Wrote the presentation and organized all slides along with managing the GitHub.

TP

Developed the HTML structure for 8 pages added images and gif animations
